To:	Dr. Sang-Mi Lee, South Coast Air Quality Management District
From:	Adam Poll, Dudek
Subject:	Annual Emissions Inventory, 2024 SpaceX Operations within the South Coast Air Basin
Date:	January 31, 2025
cc:	Brian Pownall, SpaceX
Attachment(s):	A, 2024 Emissions Calculations
	B, 2024 Marine Vessel Trip Reports

Space Exploration Technologies (SpaceX) is submitting this annual emissions inventory of its 2024 operations that occur within the South Coast Air Basin (SCAB) for submittal to the South Coast Air Quality Management District (SCAQMD). This memorandum has been prepared by Dudek on behalf of SpaceX and is intended to serve as a standalone document showing compliance with the annual reporting requirement stipulated in the SCAQMD *General Conformity Determination for the Increased SpaceX Launch Operations at Vandenberg Space Force Base During 2025-2030*, dated September 26, 2024 (SCAQMD 2024).

1 Introduction

1.1 Report Purpose and Scope

The purpose of this technical memorandum is to present an inventory of emissions associated with SpaceX operations within the SCAQMD during the year 2024. This document outlines ongoing efforts to track SpaceX VSFB launch-related activity within the SCAB and quantify the emissions associated with these operations. The inventory begins with an explanation of the general conformity determination process and overview of the operations within the SCAB. The memorandum includes a detailed methodology (see Section 2, Methodology) for the emissions calculations associated with each emissions source. The methodology section is based off of the approved approach from the SCAQMD's general conformity determination letter (SCAQMD 2024).

1.3 Project Description

The first-stage boosters and fairings of the Falcon rockets are transported from the Port of Long Beach to the VSFB Harbor via a "roll-on-roll-off" (RORO) barge. SpaceX transports first stage boosters and fairings from the Port of Long Beach (POLB) to the VSFB harbor via a "roll-on-roll-off" barge, as described in the 2024 Environmental Assessment (EA) for the Falcon 9 launch cadence Increase at VSFB (DAF 2024). The first stage is transferred from the drone ship to SpaceX's Self-Propelled Modular Transport (SPMT) that is positioned on a small, low draft barge. The first stage is then pulled by a tug using a Tier 3 (or better) engine from the Port of Long Beach through state and federal waters into the VSFB Harbor. Following each launch, SpaceX would perform a boost-back and landing of the first stage, either downrange on a drone ship or at landing zones at VSFB.

After each launch, the fairing is recovered from the Pacific Ocean via a support marine vessel. The fairing and parafoil is recovered by a salvage ship stationed in the designated Landing Area, as described in the 2024 EA (DAF 2024). Prior to recovery, salvage ship travels near the anticipated splashdown site, but no closer than 12 nm offshore. SpaceX lands first stage boosters at VSFB or downrange on a drone ship as described in the 2024 EA (DAF 2024). For water landings, the first stage and barge are towed using a marine vessel back to the Port of Long Beach. A full description of launch operations is available in the 2024 EA (DAF 2024). In 2024, SpaceX completed 46 launch operations (36 RORO operations).

2 Methodology

The following section discusses the emission calculation methodology for each activity occurring within the SCAB, which is the geographic boundary for the emissions inventory described in this memorandum. This methodology is based off the approach approved in the SCAQMD's 2024 General Conformity Determination document (SCAQMD 2024). Operational activities covered in this section include emissions from marine vessels, offroad vehicles used in loading and unloading at Port of Long Beach, and payload fairing recovery operations. Onboard GPS data from the marine vessels was used to verify the activity within the SCAQMD jurisdiction.

2.1 Marine Operations

Marine operations involve two tugboats and a barge to deliver rocket boosters and fairings mounted on a transporter to VSFB Harbor (RORO operations). The primary tugboat and barge depart from the POLB and travel up the coast through state and federal waters to the VSFB Harbor. The support tugboat departs from the Port of Hueneme and travels up the coast through state waters to the VSFB Harbor. The support tugboat does not operate within the SCAB and therefore is not included herein.

SpaceX has identified Curtin Maritime (Curtin) as a marine solutions company to provide the tugboat and barge services. In 2024, there were two vessels in use as the primary tugboat, the Elizabeth C and the Kelly C; however, only one primary tugboat is in active use on a single mission. The Elizabeth C is powered by two 1,300 horsepower Cummins QSK38-M2 Tier 4 diesel engines, while the Kelly C is powered by two 1,300 horsepower Cummins QSK38-M1 Tier 3 diesel engines, which have been electronically derated to 1,000 horsepower. In addition, the primary tugboats utilize two 99 horsepower John Deere 4045AFM85 Tier 3 diesel engines for auxiliary power. The barge utilizes a 49 horsepower Tier 4 Final diesel generator to power auxiliary loads and to provide accessory power to the tug while it is offline and docked.

To estimate per trip emissions within the SCAQMD from marine vessel RORO operations, we estimated engine load factors and emissions using the following equations:

Equation 1: Engine Load Factor

$$LF = \frac{G \; x \; HHV}{Engines \; x \; HP \; x \; Hrs \; x \; BSFC}$$

Notes: **LF** = load factor; **G** = total gallons for the year of R99 diesel fuel; **HHV** = higher heating value (137,000 btu/gallon for R99); **Engines** = number of engines; **HP** = engine rating brake horsepower of the engine; **Hrs** = total engine hours for the year; **BSFC** = brake specific fuel consumption (7,420 btu/bhp-hr).

Equation 2: Emissions

$$Em = \frac{EF\ x\ kW\ x\ LF\ x\ Hrs\ x\ Engines}{453.6\ x\ 2{,}000}$$

Notes: Em = Annual emissions (tons per year); **EF** = pollutant specific emission factor (g/kW-hr); **kW** = kilowatt rating of engine; **LF** = load factor of engine (from Equation 1); **Hrs** = total engine hours for the year; **Engines** = number of engines; **453.6** = conversion factor (453.6 g = pound); **2,000** = conversion factor (2,000 pounds = ton).

2.2 Booster Recovery

Booster landings occur both on land and on water in the Pacific Ocean. For water landings, the first stage and barge are towed using a marine vessel back to the Port of Long Beach. Marine vessels involved in the booster recovery include the tugboat, support boat, and barge. For more information on vessel assumptions, see the DAF's 2023 Supplementary Environmental Assessment for the Falcon 9 launch cadence increase at VSFB (DAF 2023).

Due to a lack of jurisdictionally specific information regarding booster landings, as a conservative estimate it was assumed that all 36 RORO operations involved water landings and associated marine vessel emissions occurring within the SCAB. Emissions were estimated using a spreadsheet model with emission factors based on the engine tier and activity data. See Equations 1 and 2 in Section 2.1 for information regarding engine load factor and emissions calculations.

2.3 Payload Fairing Recovery

After each launch, the fairing was recovered from the Pacific Ocean via a support marine vessel. For more information on vessel assumptions, see the DAF's 2023 SEA (DAF 2023).

Emissions from the support vessel were calculated using a spreadsheet model and emission factors based on the engine tier and the activity data for the recovery. See Equations 1 and 2 in Section 2.1 for information regarding engine load factor and emissions calculations.

2.4 Offroad Equipment

Emissions from offroad equipment used to load and unload boosters and payloads from the barges at POLB during RORO activities and booster recovery are included in the emissions inventory. Equipment pieces include two cranes, an LR-1300 Crawler Crane powered by a 603 horsepower Tier 3 engine, a Tadano ATF 220G Crane powered by a 197 horsepower Tier 4 engine, and a KAMAG transporter powered by a 453 horsepower Tier 3 engine.

Due to the lack of available jurisdiction specific records for the offroad equipment and the fact that offroad equipment comprise a small portion of the overall proposed emissions, actual operating days for offroad equipment utilized in launch operations was estimated based on detailed marine vessel trip information. The hours per day were assumed to be the same as within the 2024 EA (DAF 2024).

The emissions were calculated using equation 3 below:

Equation 3: Offroad Equipment Emissions

$$Em = \frac{EF\ x\ HP\ x\ LF\ x\ Hrs\ x\ Days}{453.6\ x\ 2{,}000}$$

Notes: EM = annual emissions (tons per year); **EF** = pollutant specific emission factor (g/hp-hr); **HP** = horsepower of engine; **LF** = load factor (from 2024 EA (DAF 2024)); **Hrs** = hours per day (from 2024 EA (DAF 2024)); **Days** = days per year; **453.6** = conversion factor (453.6 g = pound); **2,000** = conversion factor (2,000 pounds = ton).

3 Results

Operational emissions occurring within the SCAB during 2024 were estimated according to the methodology discussed in the previous section, and the results are shown in Tables 1 and 2 below. Table 1 shows total emissions for each criteria pollutant, organized by source category described in Section 2, Methodology.

Table 1. 2024 Falcon Launch Program Emissions, Los Angeles County

Emissions Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Tons Per Year					
Booster Recovery	0.07	0.37	0.15	0.06	0.03	0.03
Fairing Recovery	0.02	0.11	0.05	0.02	0.01	0.01
Marine Operations	0.20	2.41	3.44	0.05	0.05	0.05
Off-road Vehicles	0.02	0.31	0.41	0.00	0.01	0.01
General Conformity De Minimis Thresholds	*10*	*10*	*100*	*100*	*100*	*70*
Total	**0.31**	**3.19**	**4.05**	**0.12**	**0.10**	**0.10**
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compound; NOx = oxides of nitrogen; CO = carbon monoxide; SOx = sulfur oxides; PM10 = coarse particulate matter; PM2.5 = fine particulate matter
See Attachment A for complete results.
Totals may not sum due to rounding.

As shown in Table 1, annual emissions from Falcon Launch Program at VSFB occurring in the SCAB would not exceed the de minimis thresholds for VOC, NOx, CO, SO_x, PM_{10}, or $PM_{2.5}$. Table 2 shows total per-trip criteria air pollutant emissions within Los Angeles County jurisdiction for each launch operation that occurred in 2024.

Table 2. SpaceX Total Emissions, Los Angeles County 2024

Trip Number	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$

33	0.00	0.04	0.06	0.00	0.00	0.00
34	0.01	0.05	0.09	0.00	0.00	0.00
35	0.01	0.05	0.08	0.00	0.00	0.00
Total	**0.31**	**3.19**	**4.05**	**0.12**	**0.10**	**0.10**

Notes: VOC = volatile organic compound; NOx = oxides of nitrogen; CO = carbon monoxide; SOx = sulfur oxides; PM10 = coarse particulate matter; PM2.5 = fine particulate matter
See Attachment A for complete results.
Totals may not sum due to rounding.

As shown in Tables 1 and 2, 2024 Falcon Launch Program operations within the SCAB did not exceed the General Conformity de minimis thresholds for NOx or VOC (which is a precursor for O_3), $PM_{2.5}$, or CO, and was therefore

compliant the 2016 AQMP and consistent with the general conformity determination (SCAQMD 2017, SCAQMD 2024).

Marine exhaust emissions were calculated using the following equation:

$$Emissions_{diesel} = \sum EF_i \times Eng_i \times AvgHP \times Load_i \times Activity_i$$

Where:

EF	=	*Emission factor in grams per horse-power hour*
Eng	=	*Number of engines*
AvgHP	=	*Maximum rated average horsepower*
Load	=	*Load factor*
Activity	=	*Hours of operation*
i	=	*Equipment type*

Off-road mobile equipment exhaust emissions were calculated using the following equation:

$$Emissions_{diesel} = \Sigma\ EF_i \times Pop_i \times AvgHP \times Load_i \times Activity_i$$

Where:

EF	=	*Emission factor in grams per horse-power hour*
Pop	=	*Population, or the number of pieces of equipment*
AvgHP	=	*Maximum rated average horsepower*
Load	=	*Load factor*
Activity	=	*Hours of operation*
i	=	*Equipment type*

Trip 1 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Kelly C

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.

Trip 2 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.

Trip 3 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Kelly C

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.
