Trip 7 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.

Trip 8 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Elizabeth C

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.

FOR THE COMPANY

Trip 9 Log

Trip Description: A Falcon 9 booster will be attached to the SLC-4 Falcon 9 transporter in the Port of Long Beach and subsequently loaded on to the barge. Then, the primary tugboat will tow the barge and cargo to VSFB Harbor. A support tugboat will depart the Port of Hueneme to travel to VSFB Harbor to help maneuver the barge.

Constraints: A tug and barge underway have several factors that affect our transit speed. The crew is aware of these factors, but cannot predict where and to what extent they will affect a transit. Speed is affected by sea state, which varies and does not always match forecasted conditions. Ocean currents can change affecting speed, but also affect sea state as currents moving against the wind increase wind chop. Debris, fishing gear and other vessel traffic affects speed and route. The tug and barge must prioritize safety of navigation. They must maneuver, slow, or change course to maintain a safe distance from hazardous obstacles at sea. The Southern California offshore region is also a hot spot for Government and Naval exercises. These vessels often conduct operations without the use of AIS. The vessels are not visible to us from a long distance. We will not know they are along our route until they are within Radar range of the Vessel. Due to their operations and status, they often ask for very large distances while passing, or for our vessel to slow down or delay along our route.

Notes:

- All the information above needs additional clarification. Line items need to be broken down by dates, times within each jurisdiction on each date and specific operations type while in each jurisdiction.

- Provide supporting documentation in an attachment. This documentation should include GPS logs and maps. Additionally, note if the main and auxiliary engines operated a different number of hours on any given day or operations type.
